

Acacia wood

Acacia wood is a durable and sustainable material that can have a wide range of uses and applications. Acacia trees grow easily and quickly, often without the need for pesticides or fertilizer, and can be harvested at a young age. They are adaptable in many different climates, which makes them more available than other types of trees. Additionally, thanks to their ability to capture and store carbon and nitrogen emissions, they are an eco-friendly choice for your promotional gifts.

Moisture resistant and easy to maintain over time, acacia wood is an ideal material for kitchenware items such as our cutting boards, salad bowls and cutlery. You can opt for a more traditional look or you can choose to show your brand on unique looking items, like our stylish serving boards adorned with epoxy resin details.

In addition, the laser engraving technique creates a luxurious effect that is guaranteed to leave a lasting impression.
